

WFP Malawi DFA Monitoring P2077

Strengthening the Statistical System for Stronger Monitoring and Reporting on the NDP

Avalon along with Community Systems Foundation (CSF) is assisting the government of Malawi to strengthen M&E processes by implementing an online monitoring platform for the NDP, as well as setting up a SDG and humanitarian data warehouse.

Avalon with the support of the UN Development Programme and World Food Programme, rolled-out several DataForAll (DFA) products in Malawi to monitor and evaluate the NDP, SDG, and humanitarian indicators across the country.

The government of Malawi uses DFA Monitoring for collaborative reporting on the national development plan, resulting in an effective monitoring of national priorities.

The SDG and Humanitarian database is accessible through DFA Visualizer, which provides query and tools to create of data reports, tables, maps and graphs. DFA Visualizer is the latest addition to the DFA Toolkit.

Features

- Planning, Monitoring and Reporting Platform to monitor national priorities.
- Database of SDG and humanitarian indicators that embrace the national development agenda.
- Online data query tool to access indicator details and visualize results quickly.
- Capacity building of NSO and planning department for data system sustainability.

Benefits

- Data-driven, evidence-based platform to inform national policies.
- Enabling effective and efficient monitoring and reporting of results.

Facts
