

# WHO Quality of Care Network P1727

Custom Drupal 8 Website, Interactive Maps and Community of Practice Development

Working with the World Health Organization, CSF has redesigned and developed the Network for Improving Quality of Care for Maternal, Newborn and Child Health website to facilitate the sharing of best practices in MNCH.

In 2019, Community Systems Foundation partnered with the Quality of Care Network to provide the 11 member countries a portal to access practice resource related to maternal and child health, a Community of Practice to facilitate dialogue and a data portal to understand the current statistics and trends within each country.

With access to a vast knowledge library, RMNCH webinars and news and events, the Quality of Care Network website provides the partner countries with access to global and regional resources and best practices.

### Features

- Drupal 8 custom web design and development
- Knowledge Library for searching and publishing publication on MNCH
- Community of Practice to engage country focal and global colleagues on sharing best MNCH practices.

### Benefits

- Solution provides a sustainable platform for MNCH experts to engage and facilitate conversations on the topic.
