

NSO Mali DFA P1818

Leveraging DFA Visualizer to disseminate data and present it to a wider audience

In continuation of a long-standing partnership, Community Systems Foundation held a Data4All (DFA) capacity building workshop in Bamako, Mali for the INSTAT team to better understand how MalikunnaFoni can be utilized to disseminate data and manage the platform.

Since 2006, Community Systems Foundation (CSF) has provided support to the INSTAT team from the National Statistics Office (NSO) Mali to adopt and use DevInfo and later the Data4All (DFA) Toolkit within the MalikunnaFoni Database, one of the largest and prominent data-repository system in Africa.

In November 2022, CSF conducted a capacity-building workshop for the INSTAT team to further understand various tools within DFA and how they can be utilized to improve data management and reporting. CSF team provided training on how to leverage DFA Visualizer, develop and maintain dashboards using DFA Dashboard, and manage databases through DFA Data Manager.

The training enabled the team to query the database with almost no learning curve and accelerate data dissemination, which can promote and bolster evidence-based decision making in the country.

Features

- Utilizes DFA Visualizer to disseminate the data and present it to a wider audience.
- Metadata hub contains information on more than 1000+ indicators.
- The Mobile Application allows smart data dissemination tool with offline features for a much wider use of statistical data.

Benefit

- Ensures system-wide transparency
- Provides autonomy to the INSTAT team to manage database updates and develop data dissemination strategy.

Facts

Stakeholder	NSO Mali
Area	Mali
