Upskilling young girls through technology

Avalon is the technical partner of IPE Global in their endeavor to aid the government of Rajasthan in improving female participation in the workforce by upskilling girls.

In order to boost female participation in the workforce and to delay the age of marriage & child-bearing, skill-building of the young girls was imperative. To achieve this, Avalon was contracted by IPE Global to create a platform which served as a guide to these young women where they could learn about the job market, and in turn make informed decisions about vocational trainings. The target beneficiaries of this programme were girls who were enrolled in 182 schools of districts of Rajasthan, as well as the out of school girls of these same districts.

The solutions provided to aid this endeavour were in the form of:

- **Mobile application** : A platform that enables community mobilisers to identify the girls out of school, enroll them to suitable vocational trainings and eventually introduce them in the labour market.
- **Job portal/database** : A one-stop platform that has all the required information about the jobs and/or training opportunities available in the market.
- **Reports** : A suite of reports to aid the managers and administrators to maintain their operational tasks.

## Features

- A job portal, a database that provides a global view of the job market.
- A mobile application that can be used by community mobilisers to inspire change and equip stakeholders.
- Reports to manage and maintain logs of the operational aspects of the project.

## Benefit

- A platform that aids skill-development, and opportunity procurement.
- Empowering various stakeholders with vital data through the platform that allows real-time progress monitoring of candidates.
